

TEXAS QUICK FACTS

Proposed cuts to EPA budget threaten human health and the environment in Texas

The Environmental Protection Agency has worked to protect human health and the environment for more than four decades, cleaning our air, water, and land. During that time, we have experienced a growing economy and an expanding population, with millions more cars on the road. Deep budget cuts [proposed](#) by the Trump administration would jeopardize Americans' health and safety, reducing funds—including the [\\$1,017,854,257 in EPA grants to Texas over the last five years](#)—needed to address pollution from lead, clean up toxic sites, ensure clean water, and much more. If the President succeeds in cutting EPA's budget by almost a third, the result will be more asthma attacks among children, more toxic pollution in our communities, and more lead in our drinking water.

What benefits are at risk from EPA budget cuts?

Cleaning up dirty air

- **2,904 Texans are saved every year** by EPA programs cutting [air pollution](#) and [toxic mercury](#).
- **1,133,050 adults and 430,631 children in Texas have been diagnosed with asthma.** Asthma attacks were the cause of [62,680 pediatric emergency room visits and over \\$3,896,474,032 in associated medical costs in Texas in 2008](#).
- EPA grants cover almost 30% of state and local air quality monitoring. Almost a third of that money would disappear under the Trump budget.
- EPA protections help reduce the occurrence of “code red” days – when air pollution is so bad that children and seniors are advised not to spend time outside.

Ensuring safe, clean water

- **11,674,641 Texans rely on** headwater, rain-fed, and seasonal streams for their **drinking water**.
- EPA helps deal with [“runoff” pollution](#) – including excess fertilizers and insecticides, grease and toxic chemicals from urban runoff and energy production, acid drainage from abandoned mines, and bacteria and nutrients from livestock, pet wastes and faulty septic systems – that drains into our waterways.
- **EPA provided Texas with \$37,934,878 over the last five years to help protect Texas's water, a program Trump's budget proposes to zero out.**

Reducing lead

- There is no safe level of lead, a known neurotoxin that damages children's IQ for their entire lives.
- Over the past five decades, EPA has worked to reduce or eliminate the use of lead in gasoline, paint, plumbing pipes, and soil. The results: blood lead levels across the country have [declined more than 90%](#) since the mid-1970s.
- But more needs to be done: More than half a million kids in the U.S. today, a disproportionate number of whom are poor, have elevated levels of lead in their blood, primarily from lead paint and pipes. **The Trump budget would eliminate programs that can help these kids.**

Cleaning up toxic dumps

- In communities across the U.S., families are threatened by industrial hazardous waste, radioactive materials, and toxic chemicals such as lead, asbestos, and dioxin—causing cancer, reproductive harm, and other damaging health impacts.
- Contaminated land and water also impose economic burdens and hardships on communities. Abandoned industrial pollution sites sink real estate values, discourage investment, and undermine the efforts of local communities to re-develop and revitalize their economies.
- There are more than 1,330 sites on a list of the most highly polluted properties nationwide, known as [Superfund](#), including **53 Superfund sites in Texas**.
- There are **694 brownfield sites in Texas** that need cleaning up so that they can be used or redeveloped.
- **Yet the Trump administration is proposing to slash EPA's clean-up programs—the Superfund by a third and Brownfields by more than 20%.** With communities and states fighting to protect their citizens and re-develop their economies, this is no time to shut down EPA's hazardous waste clean-up programs.
